1 Source
service or local data
2 Normalise
tables, grids, geometry
3 Analyse
events, extremes, dependence
4 Generate
or select scenarios
query + source version
units + coordinates
method + parameters
seed + selection
5 Simulate
hydrology and hydraulics
6 Aggregate
impact metrics, uncertainty
7 Publish
figures, tables, GeoTIFF
engine + project
filters + statistics
code + environment
audit record kept for each stage
